

Better physics for coastal dynamics

School of Geosciences

se diment transport

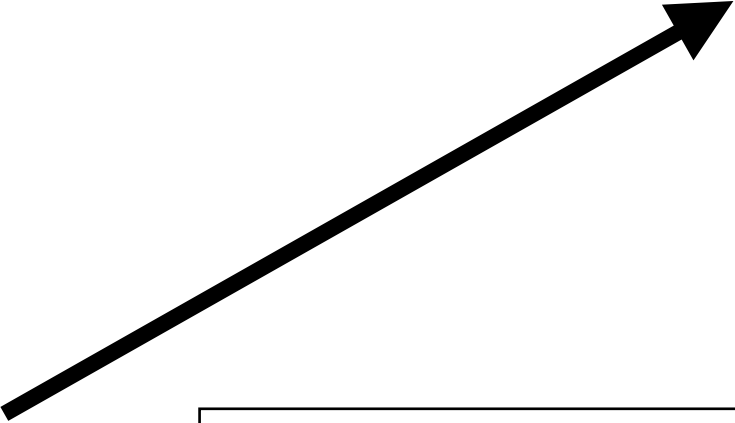

(a)

relationships between averaged grain size and averaged current speed required to erode them

non-cohesive sediments

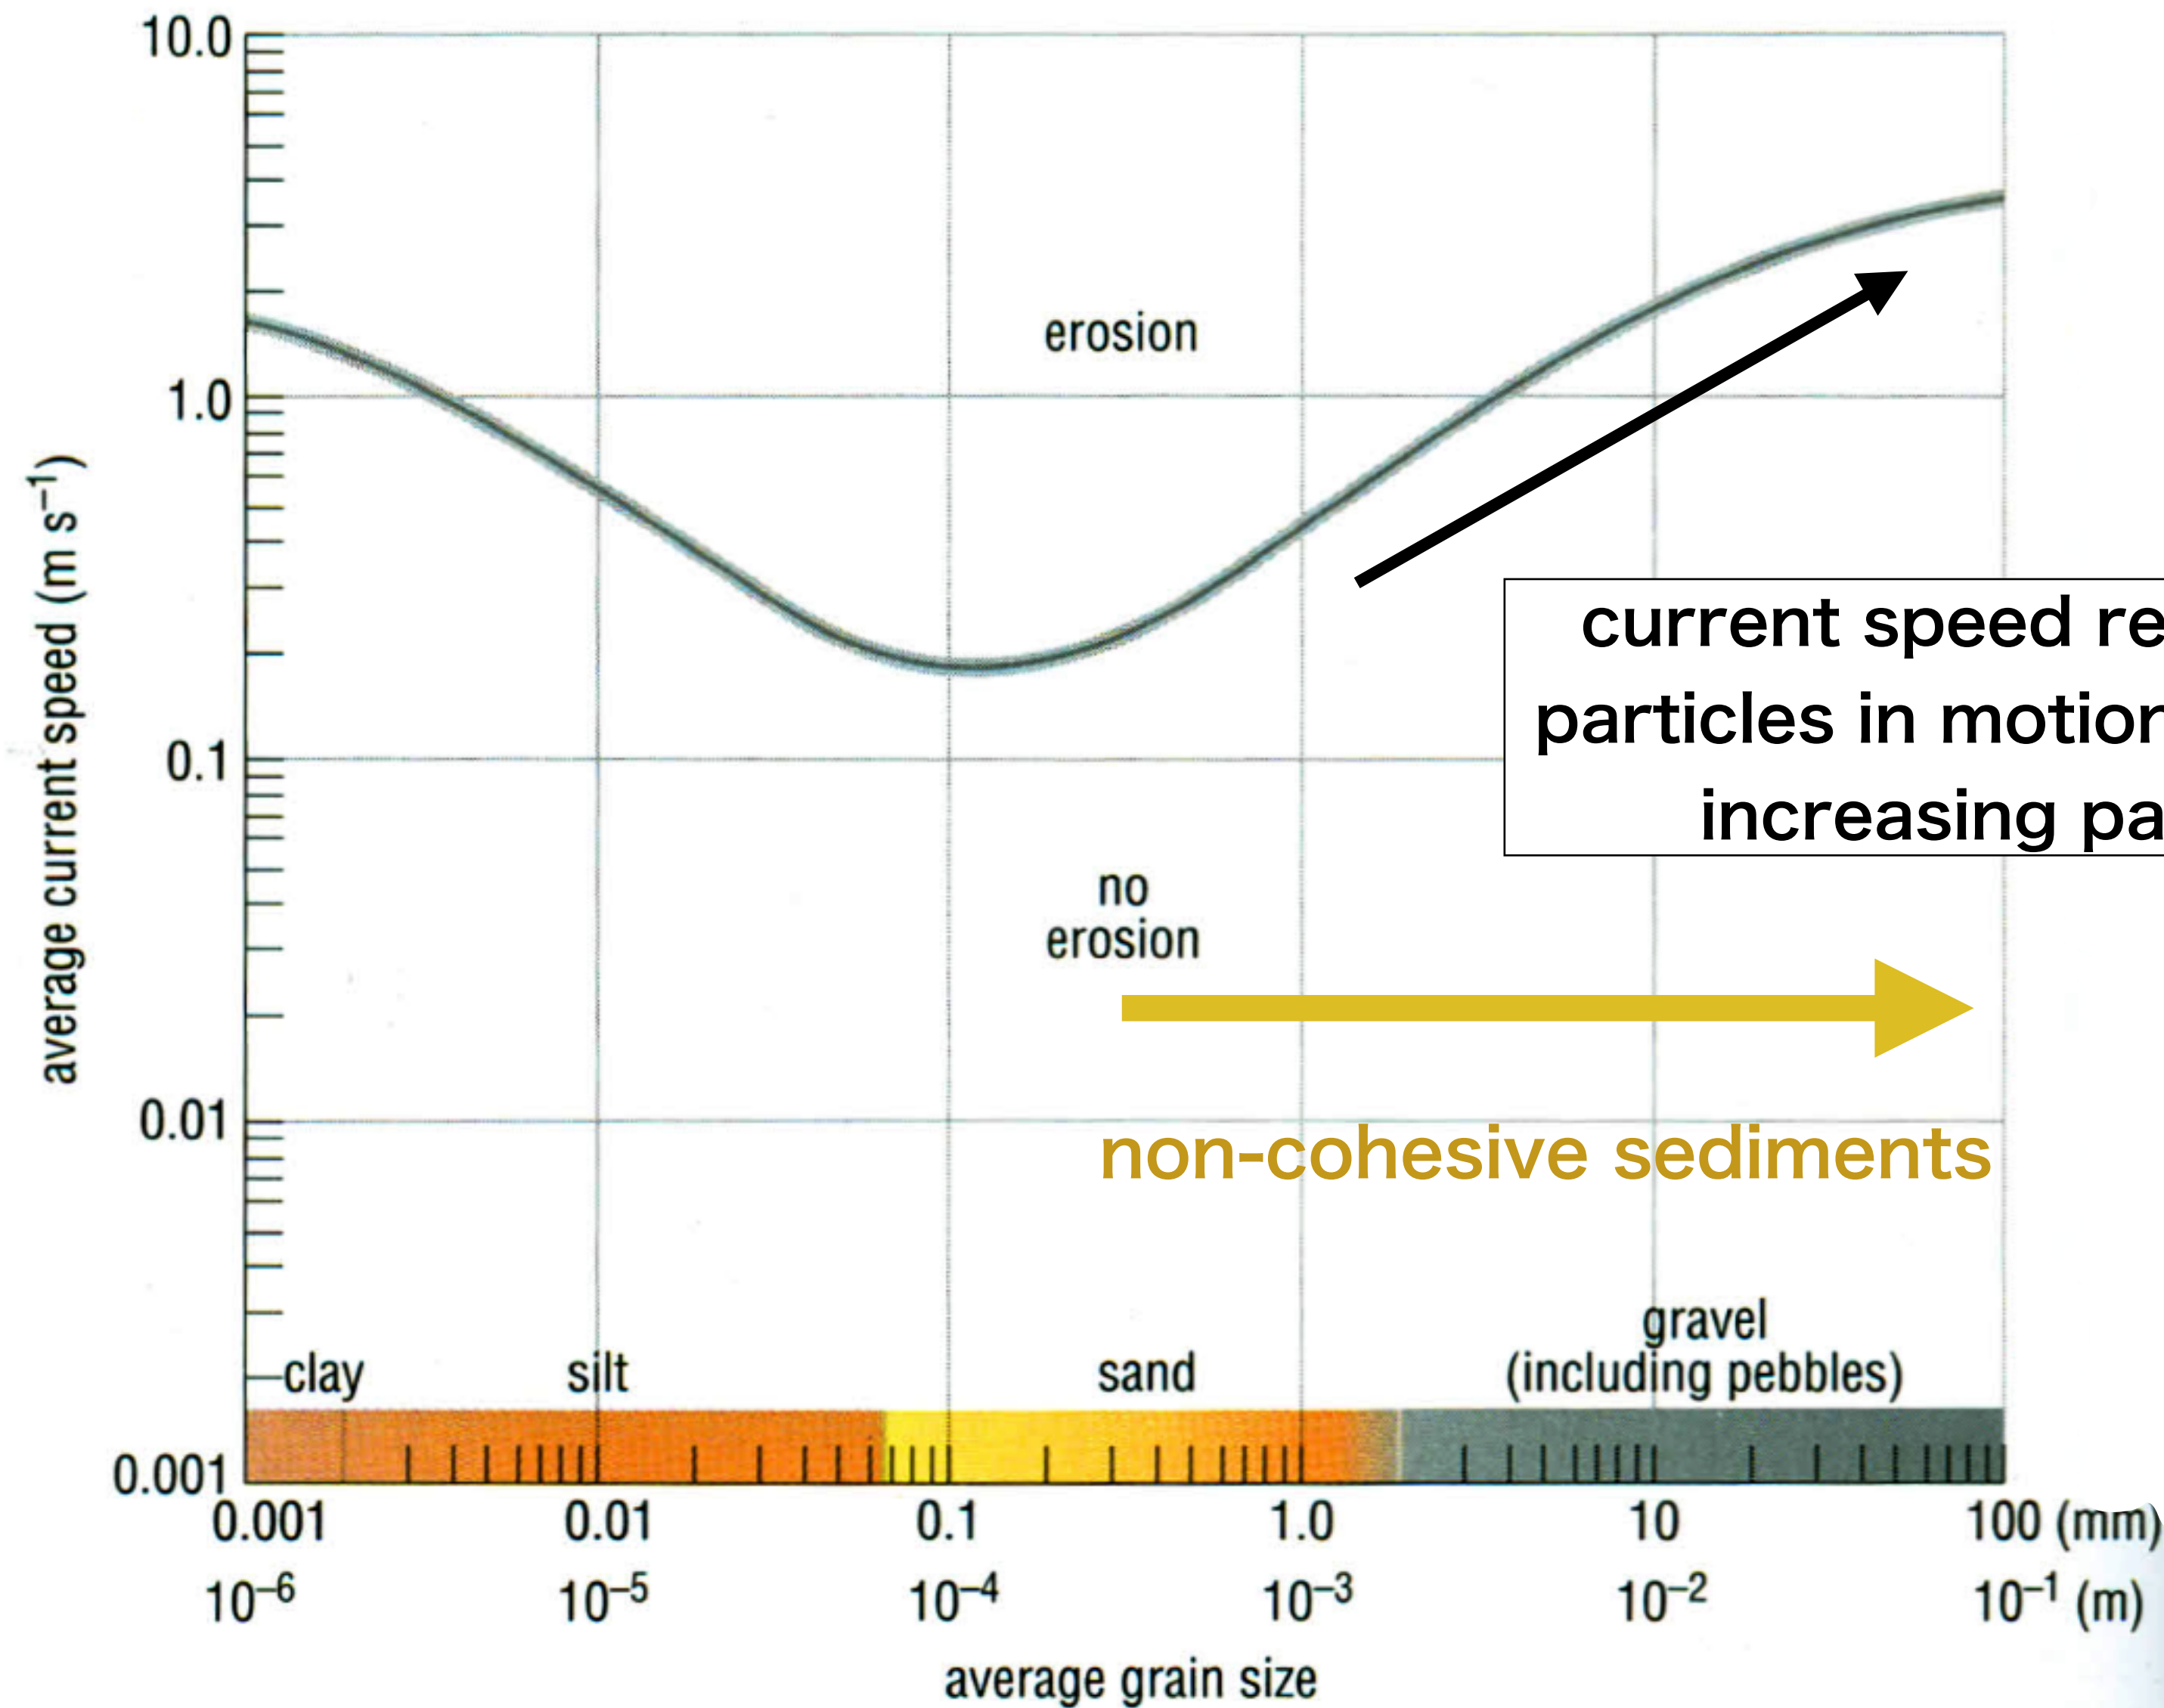

**current speed required to set
particles in motion increases for
increasing particle size**

Better physics for coastal dynamics

Sediment transport

relationship between averaged
grain size and averaged current
speed required to erode them

Better physics for coastal dynamics

Sediment transport

relationship between averaged
grain size and averaged current
speed required to erode them
